

COMPONEER™ BRILLIANT

smile
to go

The smile to go.

Innovative. Time-saving. Beautiful.

With COMPONEER BRILLIANT your dentist will give you a smile of naturally attractive teeth in just one session.

For all who simply want to be more attractive.

Make a brilliant smile your trademark. COMPONEER BRILLIANT can help you correct natural imperfections easily and economically. You're unhappy smiling because of a gap in your teeth? Or crooked teeth make you feel self-conscious? You can leave this behind you and look forward to new pleasure in life with your attractive appearance.

What is COMPONEER BRILLIANT?

COMPONEER BRILLIANT is specially manufactured, very thin shells that can be fixed to the front of the front teeth to conceal aesthetic imperfections.

COMPONEER BRILLIANT can be compared with artificial fingernails, but there is one very big difference: COMPONEER BRILLIANT restorations ensure an attractive appearance for many years.

You'll adore the new COMPONEER BRILLIANT:

- Attractive teeth and a new smile after only one visit
- Very little removal of healthy tooth structure
- Individual, customised shaping of the front teeth
- High quality permanent veneering material
- Shine can be refreshed by polishing at any time
- An economically attractive solution

Before

After

COMPONEER BRILLIANT is the high quality solution for:

- Unattractive front tooth malpositioning (e.g. twisted teeth)
- Large gaps between the front teeth (diastema)
- Front teeth with minor caries defects
- Severe tooth discolouration
- A wide range of anatomical malformations
- Broken tooth edges
- Conspicuous old fillings

Before

After

A new smile achieved easily.

With COMPONEER BRILLIANT your dentist can make your smile more beautiful in only one session. Fast, with little effect on tooth structure. Three easy steps:

Step 1

The dentist checks the condition of your front teeth, recommends the right COMPONEER BRILLIANT shade and selects the correct COMPONEER BRILLIANT shape with the template.

Step 2

Then your teeth are prepared for veneering with COMPONEER BRILLIANT. Your teeth will require very little preparation, because the tooth enamel shells are so incredibly thin. In general, very little tooth structure is lost.

Step 3

Your dentist will place the COMPONEER BRILLIANT in the desired position, using the same material from which the enamel shells were made, and will complete the final shaping of the tooth for you.

At this point you can discuss adjustments to the shape and length you want and changes can be made on the spot. As the material cures the customised COMPONEER BRILLIANT becomes securely fixed in position. The final step is to polish the tooth to match the others. Done.

COMPONEER BRILLIANT gives you attractive teeth, an economical and convincing solution. The smile to simply take away.

Simply take a
brilliant smile away
with you.

It has never been so easy to have an attractive smile.
You will be astonished to see how quickly your dentist can make your
front teeth beautiful with innovative COMPONEER BRILLIANT.
Your new life starts with your first smile after the treatment.
Enjoy your smile to go.
